(54) Title: A SYSTEM FOR DETACHABLY CONNECTING A LARGE NUMBER OF SIGNAL LINES OF TWO COMPONENTS

(57) Abstract: A system for detachably connecting a first electronic component with a second electronic component (6), whereby a large number of signal lines of the first component are connected with corresponding signal lines of the second component (6). A sheet-like part (2) of the first component is provided with a number of conducting areas (4) arranged in an array at the surface of the sheet-like part (2) near an edge (3) of said sheet-like part (2). Each of said conducting areas (4) is connected with a signal line of the first component. A part of the second component (6) is provided with a number of contact elements (7) arranged in an array at the surface of said part, whereby each of said contact elements (7) is connected with a signal line of the second component (6). Each contact element (7) has a contact surface for contacting one of said conducting areas (4) of the first component. Means (10) are present to push each of said conducting areas (4) of the first component against a corresponding contact element (7) of the second component (6).
